DESIGN SYSTEM

Visual system extracted from existing Figma screens

Purpose	Document the existing visual language before applying it to the product implementation.
Source	Existing desktop and mobile UI screens supplied for analysis.
Status	Foundation draft — extracted from the current screens; component rules should be validated before implementation.

This document captures what is already present in the screens. It is not a redesign.

Contents

- 01. Design System Overview
- 02. Color System
- 03. Typography
- 04. Spacing & Layout
- 05. Radius, Borders & Effects
- 06. Repeated UI Patterns
- 07. Responsive / Mobile–Desktop Guidance
- 08. Implementation Notes

Important: The extracted system contains observed values and frequencies. Where desktop/mobile differences were not explicitly established by the analysis, this document does not invent them.

01 — Design System Overview

The screens show a clean, blue-led interface with strong use of white surfaces, rounded containers, glassmorphism, and soft blue elevation. The dominant visual identity is built around a small set of blue brand colors, Roboto typography, a 4px spacing base, and 12px corner radius.

Core principles observed

Principle	Observed rule
Color	Blue is the primary interactive and brand family. White and very light blue/lavender surfaces carry most content.
Typography	Roboto is the dominant typeface. 16px is the primary UI size; 32px is used for page titles.
Spacing	4px acts as the implied base unit. 8px, 12px, 16px, 24px, 32px and 40px recur throughout the screens.
Shape	12px is the dominant radius for cards, inputs, modals and buttons.
Elevation	Blue-tinted shadows are a distinctive part of the visual language.
Interaction	Active states are strongly signaled with Primary Blue (#144E9D), filled stepper states and selected borders.

Design-system maturity note

The extracted data is strong enough to establish Foundations and a first component library. Before implementation, repeated patterns should be normalized into named tokens and components rather than copied as independent values.

02 — Color System

Primary / Brand Blues

Role	Hex	Observed usage
Dark Navy	#06357C	Deep accent; active stepper icons.
Primary Blue	#144E9D	Primary interactive color; active states; selected borders; stepper fills.
Vivid Blue	#0717DE	Links, highlighted text, secondary interactive accent.
Mid Blue	#99C0FB	Stepper connector lines and soft icon tints.

Neutral / Text

Role	Hex	Usage
Heading Text	#263238	Page titles and section headings; most-used text color.
Body Text	#4A4E53	Descriptions and secondary labels.
Muted Text	#666666	Placeholder text, input borders, tertiary labels.
Dark Text Alt	#1D1B20 / #191C1F	Some smaller labels.

Surfaces / Backgrounds

Role	Value	Usage
White	#FFFFFF	Cards and input fields.
Frosted White	#FFFFFF @ 77%	Glassmorphic card overlays.
Ice Blue	#F8FDFF / #F8FBFE	Subtle background tints.
Light Blue	#D7EDFD	Info banners, highlight strips, sidebar active state.
Pale Blue	#E9F4FF	Card borders and selected-row backgrounds.
Light Lavender	#F3F4FF / #E7E9FE / #EBEDFF	Notification / AI message backgrounds.
Light Gray	#F6F5F8	Page / viewport background.
Warm Orange Tint	#FEF0E5	Warning / caution banner background.

03 — Typography

Typeface

Font	Observed use	Evidence
Roboto	Primary typeface across the interface.	~95% of text.
Inter	Secondary / occasional use.	~11 occurrences.

Weight scale

Weight	Usage	Observed frequency
500 — Medium	Default for most UI text: labels, navigation, body, buttons.	132
400 — Regular	Supporting descriptions and input values.	43
700 — Bold	Page titles and emphasis headings.	17

Size scale

Size	Role	Frequency
32px	Page titles such as “Who are you paying?” and “Bank account details”.	15
16px	Primary body, labels, buttons and navigation.	115
12px	Captions, tags and supporting information.	28
10px	Micro labels, stepper labels and badge text.	45

Line height

150% is dominant (~160 occurrences). Larger headings also use a tighter 120% setting. Some small text uses a fixed 16px line height.

Recommended named text styles

Style	Suggested token	Notes
Display / Page Title	Roboto 700 / 32 / 120%	Primary page heading.
Body / UI	Roboto 500 / 16 / 150%	Default UI text.
Body / Supporting	Roboto 400 / 16 / 150%	Descriptions and values.
Caption	Roboto 400-500 / 12 / 150%	Supporting information.
Micro	Roboto 500 / 10 / 16px	Stepper labels and badges.

04 — Spacing & Layout

Spacing scale

Value	Frequency	Typical use
4px	57	Tight inline elements; icon + label.
8px	190	Standard compact spacing.
10px	200	Most-used gap; list items and form rows.
12px	147	Card internal content spacing.
16px	35	Section separators and medium gaps.
24px	112	Major content blocks.
32px	33	Large section separation.
40px	43	Top-level section gaps.

Base unit

The observed system strongly suggests a 4px base unit. Most values are multiples of 4. The 10px gap is a notable exception and is currently the most frequent observed gap; it should be retained where it is intentional rather than forcibly rounded away.

Padding

Pattern	Observed use
4px uniform	Compact pills and badges.
6px top/bottom + 4px left/right	Tags and chips.
12px uniform	Standard cards and containers.
24px uniform	Large cards and panels.
12px top/bottom + 24px left/right	Buttons and wide containers.
0 / 20px horizontal	Sidebar horizontal inset.

Layout guidance

The screens should preserve a clear hierarchy: page-level spacing → section spacing → component spacing → internal content spacing. When implementing responsive layouts, spacing tokens should be reused rather than introducing one-off pixel values.

05 — Radius, Borders & Effects

Border radius

Radius	Frequency	Usage
12px	363	Dominant radius: cards, containers, inputs, modals, buttons.
10px	34	Secondary containers.
8px	35	Smaller cards, tags, inner elements.
6px	11	Compact elements.
5px	10	Small chips / badges.
80-100px	11 each	Avatars and circular profile images.
9999px	2	Fully rounded pill / stepper shapes.

Shadows & effects

Effect	Observed value	Usage
Blue card shadow	0 4px 4px #0D7BD5 @ 31%	Primary card shadow; 85 elements.
Blue glow	0 0 7px #165EF7 @ 25%	Ambient glow around focused/elevated elements; 45 occurrences.
Neutral shadow	0 4px 4px #000000 @ 25%	Rare; 1 occurrence.
Background blur	19px	Frosted-glass panels; 56 occurrences.
Heavy background blur	54px	Outer background elements; 29 occurrences.

Borders / strokes

Color	Weight	Frequency	Usage
#666666	1px	110	Default input borders.
#144E9D	1px	63	Active / selected borders.
#C8C8C8	1px	38	Subtle card / divider borders.
#FFFFFF	1px	38	White borders on dark contexts.
#E9F4FF	1px	18	Light blue card borders.
#06357C	1px	24	Dark blue accents.
#1E1E1E	2px	33	Icon strokes.
#0717DE	1px	9	Active links / highlights.
#E76702	1px	4	Warning / orange accents.

06 — Repeated UI Patterns

These patterns were repeatedly observed and are strong candidates for reusable Figma components.

Pattern	Core specification	Suggested component states
Stepper	Numbered circles; completed = #144E9D; upcoming = outlined; connector = #99C0FB; labels = 10px Roboto Medium.	Completed / Current / Upcoming / Disabled
Content Card	White @ 77% overlay; 12px radius; blue-tinted shadow; 12–24px padding.	Default / Selected / Elevated / Disabled
Glass Sidebar	19px background blur; blue gradient tint; icon + navigation item structure.	Default / Active / Hover / Disabled
Form Input	1px #666666 border; 12px radius; focus/active border = #144E9D.	Default / Focus / Error / Disabled
Selection Card	Bordered container with radio-style selection; active border = #144E9D; active fill = #E9F4FF or #D7EDFD.	Unselected / Selected / Disabled
Tag / Badge	Small rounded chip; 5–8px radius; 6×4px padding; contextual colored background.	Type variants such as ACH / Wire / USDC
Primary CTA	#144E9D fill; white text; 12px radius; 12×24px padding.	Default / Hover / Pressed / Disabled
Secondary / Ghost	White fill; 1px #666666 or #144E9D border; 12px radius.	Default / Hover / Pressed / Disabled
Info / AI Banner	Light lavender background; rounded container; sparkle / AI icon.	Default / With action
Warning Banner	#FEF0E5 or #D7EDFD background; action button such as Verify Identity.	Warning / Info / With action
Profile Block	80–100px circular avatar; bold name; email / handle underneath.	Default / Compact
Verification Code	Individual digit boxes with 1px border; active digit box receives focus highlight.	Empty / Focus / Filled / Error

Componentization rule

A repeated visual pattern should become a component when its structure and behavior are meaningfully shared. Similar-looking elements should not be merged solely because they share a color, radius, or size.

07 — Responsive / Mobile-Desktop Guidance

The supplied analysis contains screens representing more than one viewport context, but it does not establish a complete mobile-vs-desktop token map for every property. Therefore, the system should use shared foundations with responsive modes where a difference is actually observed.

Recommended Figma structure

Foundation	Desktop	Mobile	Rule
Colors	Shared	Shared	Do not create separate color systems unless a real contextual difference exists.
Typography	Use observed desktop sizes	Use observed mobile sizes where present	Use Variables / modes for genuine size differences.
Spacing	Larger section spacing where observed	Reduced section spacing where observed	Keep the 4px base; use semantic spacing tokens.
Radius	Shared	Shared unless observed otherwise	12px remains the dominant system radius.
Components	Responsive variants	Responsive variants	One component family; do not duplicate the whole library.
Layout	Grid / container rules	Stack / compact rules	Use Auto Layout and responsive constraints.

Important implementation principle

Mobile and desktop should be treated as modes or responsive behaviors of the same design system, not as two unrelated design systems. This keeps the component library consistent and prevents drift.

08 — Implementation Notes

This document is intended to become the visual source of truth for future implementation work.

Recommended Figma foundations

Layer	Create in Figma
Color variables	Brand, text, surface, border and status variables using the observed hex values.
Typography styles	Roboto-based named text styles for title, body, supporting text, caption and micro text.
Spacing variables	4 / 8 / 10 / 12 / 16 / 24 / 32 / 40px, with semantic aliases where useful.
Radius variables	5 / 6 / 8 / 10 / 12px plus full-round for pills and avatars.
Effect styles	Blue card shadow, blue glow and blur effects as reusable styles where Figma supports them.
Components	Stepper, Card, Sidebar, Input, Selection Card, Badge, Buttons, Banners, Profile, Verification Code.

Validation before implementation

Before the Design System is used to correct the coded interface, compare every proposed component against the original source screens. If an extracted value appears only once, do not automatically promote it to a global token.

Source-of-truth rule

The original Figma screens remain the visual reference. This document formalizes the recurring rules observed in those screens. When the two conflict, the conflict should be reviewed rather than silently introducing a new style.

Next recommended step

Create the actual Figma Design System file from these foundations, then validate the components against the source screens before documenting implementation rules.
